**Palm Reading**

Palm reading can give you some ideas about the character of a person. Before you can do that, you need to know what the most important lines are and where they are on the palm.

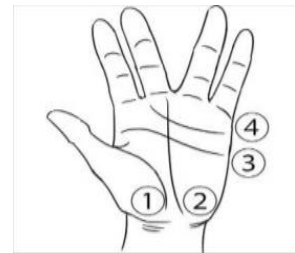

First is the big line that begins at the side of the palm between the thumb and index finger and usually goes down to the wrist. It is called the life line, and it gives you an idea about the state of your health and how old you might live on the palm.

Next is the line that starts at the same place as the life line and runs across the palm. It is called the head line, and its length is used to tell how smart a person is. So, the longer it is, the smarter you are. After that is the line that runs from the bottom of the palm up to the bottom of the middle finger. It shows when and how you will become successful and is called the fate line.

Just to the side of that is the start of the heart line. It goes across the palm to below the little finger at the edge of the hand. It shows the power of your heart and how you feel about love.

### Slow Fish

When it comes to seafood, many people think of all-you-can-eat restaurants. Fishermen have to catch even more seafood or fish no matter how big or small they are to satisfy the market. However, it hurts our environment a lot. Because of overfishing, the number of fish in our oceans is becoming smaller and smaller. In 2005, the Slow Fish movement was held by ocean-lovers in Italy to raise public awareness about the issue of sustainable fish—people catch fish in a way that doesn't harm ecosystem. Because they thought if they did not act more carefully, overfishing may completely empty fish in the oceans. Many countries, like America, the UK and Japan, around the world joined the movement.

A way to stop overfishing is to go to Slow Fish restaurants. Slow Fish restaurants want to help ocean life stay at healthy numbers. At Slow Fish restaurants, they only buy fish which were caught locally and in season. People can stop fishing if the number of nearby fish drops quickly. This way, people can easily check how many fish are still nearby.
